## Future Secular Free Iran Leaders

Dr. Pardis Sabeti is the Iranian-American and Smartest Woman Alive  
In addition to being named one of TIME Magazine's Persons of the Year in 2014 (Ebola Fighters), Sabeti was listed as one of TIME magazine's 100 most influential people in 2015.

Dr. Pardis Sabeti is a Professor at the Center for Systems Biology and Department of Organismic and Evolutionary Biology at Harvard University and the Department of Immunology and Infectious Disease at the Harvard School of Public Health. She is an Institute Member of the Broad Institute of Harvard and MIT, and a Howard Hughes Investigator.

When the Ebola epidemic began in West Africa, Dr. Pardis Sabeti led a team that did something critically important: it sequenced virus samples from infected patients almost as soon as the outbreak began. This marked the first in-depth use of real-time DNA sequencing in the midst of such a deadly pandemic. Pardis and her team were able to work out clearly that the virus was spreading human to human—not from mosquito bites or some pig vector or something else. There were so many theories out there, but her work proves that there's nothing like real data to get rid of myths and guesses and get down to the facts. Many of her scientific collaborators died during this outbreak. This is high-risk research, but it ended up saving a lot of lives too. There is no excuse not to do this kind of work with every outbreak that ever occurs in the future.
